and Hans Joachim Werner**

Tenth Special Issue (Part 1) on Linear Algebra and Statistics

S. Puntanen, G.P.H. Styan and H.J. Werner	
Preface	1
J.K. Baksalary	
An elementary development of the equation characterizing best linear unbiased estimators	3
J.K. Baksalary	
A new approach to the concept of a strong unified-least-squares matrix	7
J.K. Baksalary and O.M. Baksalary	
On linear combinations of generalized projectors	17
J.K. Baksalary and O.M. Baksalary	
Nonsingularity of linear combinations of idempotent matrices	25
J.K. Baksalary and O.M. Baksalary	
Relationships between generalized inverses of a matrix and generalized inverses of its rank-one-modifications	31
J.K. Baksalary, O.M. Baksalary and H. Özdemir	
A note on linear combinations of commuting tripotent matrices ...	45
J.K. Baksalary and J. Hauke	
Characterizations of minus and star orders between the squares of Hermitian matrices	53
J.K. Baksalary and X. Liu	
An alternative characterization of generalized projectors	61
O.M. Baksalary	
Idempotency of linear combinations of three idempotent matrices, two of which are disjoint	67
K. Balasubramanian and M.I. Beg	
Three isomorphic vector spaces—applications to binomial identities, Urn models and order statistics	79
Y. Chikuse	
Hermite and Laguerre polynomials with complex matrix arguments	91
E.B. Dagum and A. Luati	
A linear transformation and its properties with special applications in time series filtering	107

Table of Contents continues

Table of Contents continued

J. Dauxois, G.M. Nkiet and Y. Romain	
Canonical analysis relative to a closed subspace	119
P. Druilhet	
Conditions for optimality in experimental designs	147
O. Dunajeva	
The second-order derivatives of matrices of eigenvalues and eigenvectors with an application to generalized F -statistic	159
F. Eicker and G. Ewald	
Linearly independent set families	173
P. Foschi and E.J. Kontoghiorghes	
A computationally efficient method for solving SUR models with orthogonal regressors	193
D.A. Griffith	
Extreme eigenfunctions of adjacency matrices for planar graphs employed in spatial analyses	201
P.J.F. Groenen and M. van de Velden	
Inverse correspondence analysis	221
J. Groß and A. Markiewicz	
Characterizations of admissible linear estimators in the linear model	239
D.R. Jensen and S.S. Srinivasan	
Matrix equivalence classes with applications	249
T. Klein	
Invariant symmetric block matrices for the design of mixture experiments	261
J.J. Koliha, V. Rakočević and I. Straškraba	
The difference and sum of projectors	279
A. Kukush and H. Schneeweiss	
A note on a matrix inequality for generalized means	289
G. Lešnjak	
A note on an algebraic version of Cochran's theorem	295
J.K. Merikoski and A. Virtanen	
The best possible lower bound for the Perron root using traces	301
M. Pihlak	
Matrix integral	315
D. Sengupta	
On the Kalman filter with possibly degenerate and correlated errors	327

Table of Contents continues

Table of Contents continued

Y. Takane	
Matrices with special reference to applications in psychometrics . . .	341
J.M.F. ten Berge, N.D. Sidiropoulos and R. Rocci	
Typical rank and indscal dimensionality for symmetric three-way arrays of order $I \times 2 \times 2$ or $I \times 3 \times 3$	363
A.K. Vaish and N.R. Chaganty	
Wishartness and independence of matrix quadratic forms for Kronecker product covariance structures	379
J. Volaufová	
Some estimation problems in multistage linear models	389
Author index to volume 388	399
